EDUCATION

University of Toronto

Bachelor of Science in Computer Science

Toronto, Ontario

Sep 2022 – Apr 2027

- **Relevant Courses:** Data Structures and Algorithms, System Design, Databases, Operating Systems

EXPERIENCE

Royal Bank of Canada (RBC)

Jan 2026 – Present

Software Developer Intern - RBC Clear

Toronto, ON

- Built and maintained **Java Spring Boot microservices** for a high-volume U.S. corporate payments platform serving **Fortune 1000 clients** and processing **1M+ payment instructions** for **RBC Capital Markets**.
- Reduced end-to-end payment preprocessing latency by **55%** by introducing **API versioning (v2)** and **parallelized Camunda workflows**.
- Validated backend changes in **Azure Kubernetes Service (AKS)** by deploying feature-branch builds to **Kubernetes pods** and testing runtime behavior prior to merge and release.
- Improved payment transaction retrieval performance by **30%** by integrating with a managed **Elasticsearch** service, using **inverted indexing** and **search_after** pagination to speed up filtering and sorting across high-volume transaction data.
- Diagnosed and resolved production issues across microservices using **Splunk** and **Dynatrace**.
- Increased service reliability by implementing comprehensive unit tests using **JUnit** and **Mockito**, achieving **80%+ code coverage** in a regulated banking environment.

Traveltical

Sep 2025 - Dec 2025

Software Engineer Intern

Toronto, ON

- Enhanced backend systems with **Node.js** and **TypeScript**, launching **v3 API versioning** to enable backward-compatible changes and seamless adoption across HTTP-based consumers.
- Built **layered RESTful services** backed by **Prisma ORM** for scalable, type-safe database access, and produced **Swagger/OpenAPI** specs to formalize API contracts and streamline testing, maintenance, and onboarding.

Appy.yo

May 2025 – Aug 2025

Software Engineer Intern

Toronto, ON

- Developed and tested full-stack features for an AI-powered physiotherapy platform using **Java (Spring Boot)**, **React (TypeScript)**, **PostgreSQL**, **Docker**, and **Nginx**, and deployed on **AWS EC2** instance.
- Implemented RESTful APIs for injury-aware workout recommendations, session logging, and an **LLM-based physiotherapist chatbot**; integrated DeepSeek AI and JWT authentication, eliminating per-request database look-ups and cutting latency by $\approx 80\%$.
- Optimized performance and implemented **caching** strategies to reduce REST calls response time from over 10 seconds to below **300 milliseconds** while improving backend troubleshooting and service responsiveness.

PROJECTS

Hybrid Stock & Crypto Exchange | *Spring Boot, Next.js, React, PostgreSQL, Redis, Polygon API, Coinbase API*

- Built a full-stack hybrid trading platform for stocks and cryptocurrencies, leveraging **Polygon.io** and **Coinbase Exchange API** to provide real-time market data, with $\approx 90\%$ accuracy.
- Optimized backend performance using **Redis caching (TTL-based)**, reducing external API calls by **50%**, and ensuring transactional safety with **PostgreSQL** under concurrent order execution; validated scalability through API load testing with **Postman**. [Hybrid Exchange](#)

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, TypeScript, SQL, Go

Backend & APIs: Spring Boot, Node.js, REST APIs, JWT, OAuth 2.0, Swagger/OpenAPI, Prisma ORM, Redis, PostgreSQL, Kafka, Microservices, Distributed Systems, MVC, API Versioning, ACID Principles, Jenkins

Frontend/Tech: React, Next.js, HTML, CSS

Cloud & Infrastructure: Docker, Nginx, AWS EC2, AWS S3, Microsoft Azure, Kubernetes, GCP

Testing & Practices: Unit Testing, JUnit, Mockito, CI/CD Pipelines, Agile/Scrum, TCP/IP, HTTP

Developer Tools: Git, Postman, Linux/Unix, JIRA, Camunda, VSCode, Version Control
