EDUCATION

University of Toronto

Bachelor of Science in Computer Science

- **Relevant Courses:** Data Structures and Algorithms, System Design, Databases, Operating Systems

Expected Graduation: December 2027

EXPERIENCE

Squarepoint Capital

Incoming Software Engineer Intern

- Real-Time Trading Systems

Winter 2027

Montreal, QC

Pinterest

Incoming Software Engineer Intern

- Cloud Architecture Team

Fall 2026

Toronto, ON

Royal Bank of Canada

Software Engineer Intern

- Built and maintained **Java Spring Boot microservices** for a high-volume U.S. corporate payments platform serving Fortune 1000 clients and processing **1M+ payment instructions** for **RBC Capital Markets**.
- Reduced end-to-end payment preprocessing latency by **55%** through **parallelized Camunda workflows**.
- Improved payment transaction retrieval performance by **30%** using a managed **Elasticsearch** service, leveraging **inverted indexing** and **search_after** pagination for high-volume data queries.
- Implemented a **Kafka**-based event streaming layer across distributed payment workers, publishing payment events and status changes to a **centralized source of truth** with **99.9%** delivery reliability and full audit logging.
- Deployed containerized microservices to **Azure Kubernetes Service (AKS)** cluster for isolated pod-level testing of feature-branch builds before release
- Resolved production issues across microservices using **Splunk** and **Dynatrace**.

Jan 2026 – Present

Toronto, ON

Traveltical

Software Engineer Intern

- Enhanced backend systems using **Node.js** and **TypeScript**, delivering backward-compatible API changes while reducing REST API response times by **25%**.
- Built layered RESTful services backed by **Prisma ORM** for scalable, type-safe database access, and produced **Swagger/OpenAPI** specs to formalize API contracts and streamline testing, maintenance, and onboarding.

Sep 2025 - Dec 2025

Toronto, ON

Appy.yo

Software Engineer Intern

- Developed and tested full-stack features for an AI-powered physiotherapy platform using **Java (Spring Boot)**, **React (TypeScript)**, **PostgreSQL**, **Docker**, and **Nginx**, and deployed on **AWS EC2** instance.
- Implemented RESTful APIs for injury-aware workout recommendations, session logging, and an **LLM-based physiotherapist chatbot**; integrated DeepSeek AI and JWT authentication, eliminating per-request database look-ups and cutting latency by **80%**.
- Optimized performance and implemented **caching** strategies to reduce REST API response time from over 10 seconds to below **300** milliseconds.

May 2025 – Aug 2025

Toronto, ON

PROJECTS

Hybrid Stock & Crypto Exchange | *Spring Boot, Next.js, React, PostgreSQL, Redis, Polygon API, Coinbase API*

- Built a full-stack hybrid trading platform for stocks and cryptocurrencies, leveraging **Polygon.io** and **Coinbase Exchange API** to provide real-time market data, capable of supporting **1000+ users**
- Optimized backend performance using Redis caching (TTL-based), reducing external API calls by **50%**, and ensuring transactional safety with **PostgreSQL** under concurrent order execution

TECHNICAL SKILLS

Languages: Python, Java, C/C++, HTML, CSS, JavaScript, TypeScript, SQL, Go

Backend & Systems: Spring Boot, Node.js, REST APIs, Kafka, Redis, PostgreSQL, MongoDB, Microservices, Distributed Systems, Kubernetes, Docker, GCP, AWS, Azure,
